Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-19 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6686523. Although the conflicting claims are not identical, they are not patentably distinct from each other because both claims disclose the use of a system for a mounting device comprising a top portion and a threaded lower portion, the threaded lower portion being positioned in the stud, and means for holding the component in position between the top portion of the mounting device and a plate of an insert mounted into the instrument body.

The difference between the claims in the two applications is the replacement of the term "device" with the term "stud", the term "device" broadly reads on the system as disclosed in the present application.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the device as recited by the applicant in the present

Art Unit: 2837

application to include the use of a stud as recited in the 6686523 patent because the use of studs functioning as mounting devices is conventional and well known in the art.
